 Hint

There is an undirected **star** graph consisting of n nodes labeled from 1 to n . A star graph is a graph where there is one **center** node and **exactly** $n - 1$ edges that connect the center node with every other node.

You are given a 2D integer array `edges` where each `edges[i] = [ui, vi]` indicates that there is an edge between the nodes `ui` and `vi`. Return the center of the given star graph.

Example 1:

```
class Solution {
    func findCenter(_ edges: [[Int]]) -> Int {
        var a = edges[0]
        var b = edges[1]
        if(a[0] == b[0] || a[1] == b[0]) {
            return b[0]
        } else {
            return b[1]
        }
    }
}
```
